+52 6674181199

Summary:

- Software Engineer applying the best and most effective solutions on enterprise scale.
- Full Stack Developer specialized in creating business solutions for web applications, utilizing frameworks such as Angular and Ruby on Rails, as well as developing APIs and integrating databases.

Objective*:*

- My goal is to continuously learn and apply new technologies, expand my knowledge and experience in the professional field, and share my expertise to contribute to the development of new technologies and innovative projects.

Interpersonal Skills*:*

- Decision Making, Responsible, Honest, Respectful, Teamwork, Fair, Supportive, Ownership, Friendly, Quick Learning, Work under pressure, Self-taught, I investigate until I find a solution.

Specific Skills*:*

- Programming Languages: Ruby, JavaScript, Typescript, Java, PHP.
- Other: HTML5, SCSS.
- Methodologies: Custom Combination approach of SCRUM + XP.
- Database managers: MySQL, PostgreSQL, MongoDB, Redis.
- Cloud Services: AWS Lambda, Google Cloud Functions.
- Libraries/Gems/FrameWorks: Ruby on Rails, Java, Laravel, Angular, NextJs, Bootstrap, Rspec, Hotwire-rails, Stimulus, Devise, Pundit, Audited, Pagy, Redis, Sidekiq, OpenAi, Nokogiri, Factory_bot_rails, Webpacker, ActiveStorage.
- Tools: Git, Trello, SourceTree, GitLab, Xampp, Ubuntu Server, NGINX, Node, Postman, Chrome DevTools, Visual Studio Code.

Education:

- TECNM Campus Culiacán – Computational Systems Engineering **Sinaloa, México 2015 – 2020**

PMO & Front-End Leader

EPAM **May 2025 – Jan 2026**

Project:

- Automation of Funds Transfer Pricing (FTP)

Description:

Calculation processes through SDLC management, enhancing governance and operational efficiency.

Activities:

- Analysis of requirements.
- Planning the technical resolution of the problem.
- Development of views and functionalities in front-end technologies (Angular 17, TypeScript).
- Implementation of technologies to production.
- Innovation and creativity in solutions.
- Develop UI components

Responsibilities:

- Take ownership on project and deliver high-quality work on time
- Directed the process of analysis, design, development and production of the content of the page to meet the demands of the project and customer needs.
- Delegate planned tasks to team members to achieve objectives/goals.
- Gathered, defined, and transformed customer requirements into actionable tasks and user stories.
- Effective communication
- Deliver solutions with the best development quality practices
- Correctly define time estimates of project tasks

Full Stack Developer

Neoris **Sep 2024 – May 2025**

Project:

- Administrative Legal System

Activities:

- Analysis of requirements.
- Planning the technical resolution of the problem.
- Development of views and functionalities in front-end technologies (Angular 17, TypeScript).
- Development of business logic (REST API - Microservices) back end (Java Springboot).
- Database administration and analysis (PostgreSQL).
- Implementation of technologies to production.

Responsibilities:

- Development of customized solutions using technologies for front end and back end
- User Stories Technical Analysis

- Directed the process of analysis, development and production of the content of the page to meet the demands of the project and customer needs.
- Gathered, defined, and transformed customer requirements into actionable tasks and user stories.

Full Stack Developer

Corporativo Caprepa **July 2024 – Sep 2024**

Project:

- Business Administration and Financial Management System

Activities:

- Planning solutions for a necessity
- Develop API´s for different projects and necessities
- Implement database schemas and migrations (MySQL)
- Code refactoring to improve maintenance
- Development of business logic (REST API - Microservices) back end (PHP Lavarel).
- Development of views and functionalities in front-end technologies (Angular 17, TypeScript).

Responsibilities:

- Deliver high-quality work
- Deliver solutions with the best development quality practices
- Correctly define time estimates of project tasks
- Innovation and creativity in solutions
- Develop UI components

Full Stack Developer

Fuentebuena **May 2022 – May 2024**

Project:

- Vehicle Leasing, development and maintenance of ERP and CRM systems.

Activities:

- Generation of reports with Cloud Functions and Lambda Functions and sending the data to an API
- Planning solutions for a necessity
- Develop Front-End (JS) and Back-End (Ruby on Rails and PHP Lavarel) code such as Views, Models, Controllers, Services, Helpers, Workers, Testings
- Develop API´s for different projects and necessities
- Implement database schemas and migrations (Postgres, MySQL, MongoDB)
- Code refactoring to improve maintenance
- Provide guidance to members

Responsibilities:

- Take ownership on project and deliver high-quality work on time
- Effective communication
- Deliver solutions with the best development quality practices
- Correctly define time estimates of project tasks

Full Stack Developer

Santa Maria de la Luz Jardin Funerario S.A de C.V **June 2019 – May 2022**

Project:

- Web information system for accounting administration, information on employees and customer management, such as account statements, suppliers, loans, payroll, bills receivable, amortizations, inventories, billing map with geolocation.

Activities:

- Survey of requirements, Analysis and planning the resolution of the problem.
- Development of views and functionalities in front-end technologies (React Js, Angular Js).
- Development of business logic in a REST API in back-end (Ruby On Rails).
- Database administration and analysis (MySQL).

Responsibilities:

- Development of customized solutions for the company problems using technologies for front end and back end such as AngularJs, ReactJs, Ruby, Ruby on Rails, and in the database, MySQL.
- Directed the process of analysis, design, development and production of the content of the page to meet the demands of the project and customer needs.
- Gathered, defined, and transformed customer requirements into actionable tasks and user stories.
- Automated the accounting process of the company creating tables to store information and obtain reports on suppliers, accounts receivable, inventories, amortizations, credits, loans, balance sheet.
